ABOUT ME

Frontend-focused developer with solid experience in Angular and React. I specialize in building dynamic, responsive user interfaces, while actively collaborating on backend development in C# and managing relational databases. I am a professional committed to continuous improvement, with strong logical thinking and the ability to solve complex problems in a team environment.
ntegration of artificial intelligence tools (Claude Code, Gemini) into the development workflow to accelerate implementation, refactoring, and code analysis

ESPERIENZA LAVORATIVA

Junior Full Stack Developer | 3E Informatica | Turin, Italy (July 2025 – Present)

- Development and maintenance of web applications and management systems using C#, HTML, CSS, JavaScript, React, Angular, Tailwind CSS, and Bootstrap.
- Design, implementation, and optimization of relational databases with SQL Server Management Studio and PostgreSQL.
- Integration and development of REST APIs to ensure efficient communication between frontend and backend.
- Collaboration with the development team to analyze requirements and define scalable architectures.
- Performance optimization and enhancement of user experience through modern, responsive interfaces.

TECHNICAL SKILLS

Frontend: React, Angular, JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap 5
Backend: Python, Flask, Java, C#, REST APIs
Databases: MySQL, PostgreSQL
ORMs & Data Access: SQLAlchemy
Tools & Platforms: Git, GitHub, Visual Studio Code,Jira, AI-assisted
Methodologies: Agile Development
Cloud & DevOps: Microsoft Azure – CI/CD (pipelines, releases, test deployments)

EDUCATION

NET Development Course with C# and Angular
3EInformatica | 05/2025 - 11/07/2025

- Hands-on training in application development using C#, .NET Framework/.NET Core, and Angular.
- Full-stack project development: backend logic (APIs, databases) + frontend (components, services).
- Agile methodologies and collaborative work with Git.

Advanced React and JavaScript Web Development Course
100-hour course

- Frontend development with React: Component creation, state management (hooks, Redux), JSX, and props.
- Modern JavaScript: Async functions, promises, destructuring, ES6+.
- Routing (React Router) and dynamic event handling.
- Git: Repositories, branching, and collaborative workflows.
- Deployment and debugging techniques.

Software Development Technician
(06/2023 - 07/2024)

- Developed web applications using Python, Flask, SQLAlchemy, and Jinja2.
- Programming in HTML, CSS, JavaScript, and Bootstrap 5.

Java Programming Techniques Course
(06/2022 - 11/2022 | 80 hours)

- Object-oriented programming (OOP) in Java.
- Introduction to databases and software development principles.
